Riley Technologies Electrical & Data System Harness and Sensor Design & Production

Riley Technologies offers complete, in house Electrical & Data System Design and Production capabilities. Our full design and production staff can work with you to design a wiring system that fits your individual needs. Our highly trained staff utilizes the latest and most advanced technologies to exceed your expectations.

- Lightweight, robust harness design using all Military Spec components
- Full over braid protection where required for maximum interference and physical protection
- Raychem DR-25 heat shrink, transitions and connector boots
- Autosport, Lemo, Mil-Spec and Souriau connectors for reliable interconnects
- Full harness design documentation
- Sensor selection and custom termination
- Production harness building capabilities

Riley Technologies can produce custom electrical power systems and data system wiring to meet your specifications and requirements. We will see your project through from Design to Production. All customer projects are done in the strictest confidence.

Contact Mike Tuomi or Jon Miles today about all your wiring project and sensor needs.
